

Incident Response

Incident Date(s): 8/20/2021 - 10/8/2021

Description: Google has reported 5 new HIGH rated privacy and security exploits in their Chrome browser on October 20, 2021 for a total of 265 for the year. Although disguised as a suspect promotion about being the most popular browser for over 2 billion users, Chrome continues to have the most vulnerabilities of any browser with mainly manual update process.

[Google Chrome - Security Vulnerabilities in 2021 \(stack.watch\)](#)

High - [CVE-2021-37981](#) : Heap buffer overflow,

High - [CVE-2021-37982](#) : Use after free in Incognito.

High - [CVE-2021-37983](#) : Use after free in Dev Tools.

High - [CVE-2021-37984](#) : Heap buffer overflow in PDF.

High - [CVE-2021-37985](#) : Use after free in V8.

Response: Support immediately:

- Recommended Chrome users: Open **Settings > Help > About Google Chrome** and verify the version is 95.0.4638.54 or update and restart the browser. Google is staggering this update so keep checking if unavailable and use a different browser in the meantime.
- Verified and confirmed no malicious activity in security logs on supported customer networks.
